

Cannot use internet

When encountering problem of unable to use internet Initial check as follows :

- The light status on the router. Normally, the light status must be standing green.
- Rear connector between router and access point the wall must be tight.
- Power converters connected to the router and the current welding point must be tight.
- On-off switch on the back of the router, if the status is on. So, turn off the router. And tighten all connections ready to turn on the router again
