

Ways to make your modem work efficiency And able to distribute more signals covering more areas in the house.

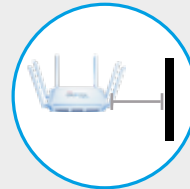

1. Place the router near the access point up to 5 meters for the WiFi signal to spread widely.
2. Should not be installed near the wall
3. 2-story house or an area of more than 50 square meters should be equipped with accessories to spread WiFi signals covering every floor.

Place in an open area, use frequently and keep the post straight.

Can be placed on a table or 150 cm off the floor

Place at least 20 cm away from the wall and not near electrical appliances.

WiFi signal distribution scope

Evenly distributed WiFi should be set up in frequently used spots. Avoid obstacles Because the WiFi signal radius is spread in a circle

How to take care of router equipment

Turn the device off when not in use or re-open. Temporarily unplug at least once a week

The power adapter connector must not be loose.

Do not use cloth or other materials to block the ventilation openings of the device.

Do not fold, bend, or tie the fiber-optic cable too tightly.
