

Connect Wi-Fi on Windows 10 to True IoT Router WiFi

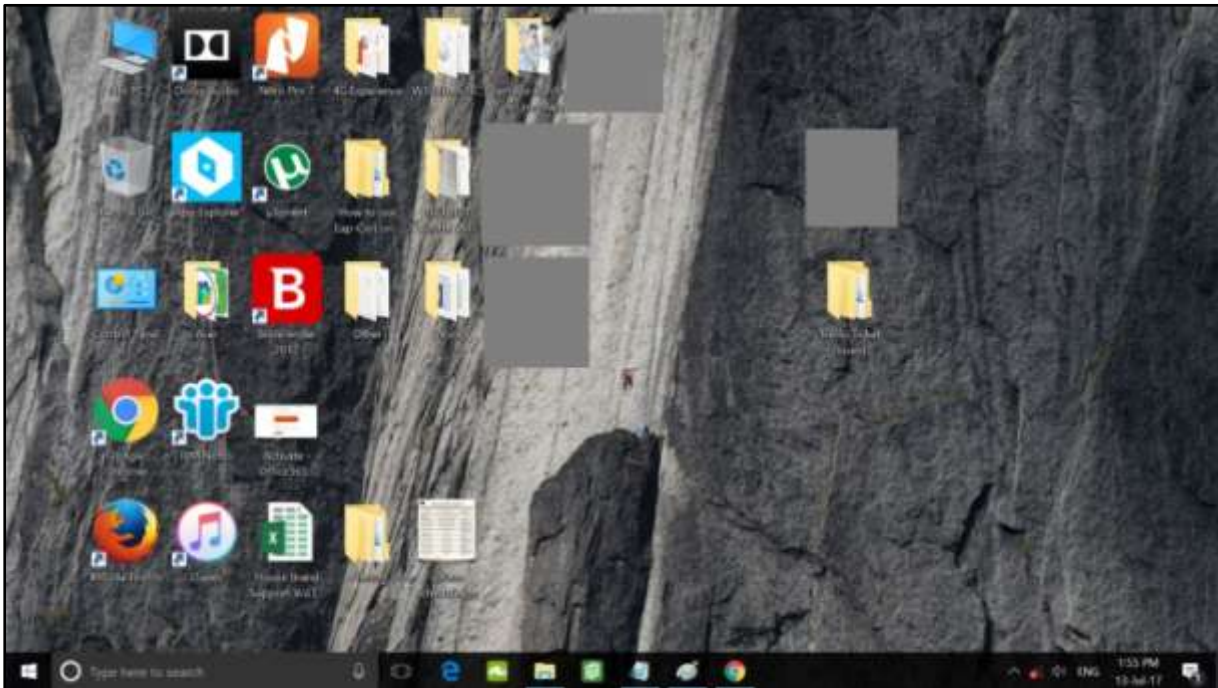

This setting is applicable to True IoT Router WiFi and Computer with OS Windows 10
(Update latest Patch in July 2017)

1. Notice at the bottom of True IoT Router WiFi, there'll be a sticker shows data for device connection

- **WLAN NAME (SSID)** : network name = TrueIoT_Router_WiFi_47776
- **WLAN KEY** : password = 30247776 (or the last 8 digits of device's IMEI numbers)
(each device will vary)

2. Back to Desktop on computer

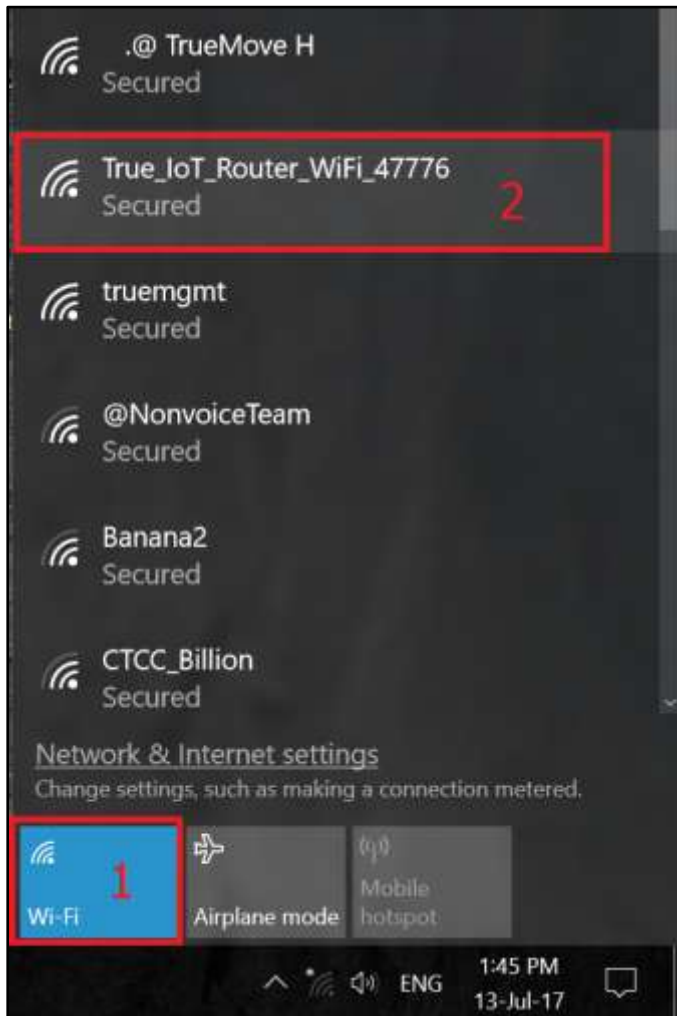

3. Notice at the bottom right

- Wi-Fi icon will have a red cross on a fan = Wi-Fi turned off => click this
- Wi-Fi Turned Off => Wi-Fi icon (fan) is grey = off => click this

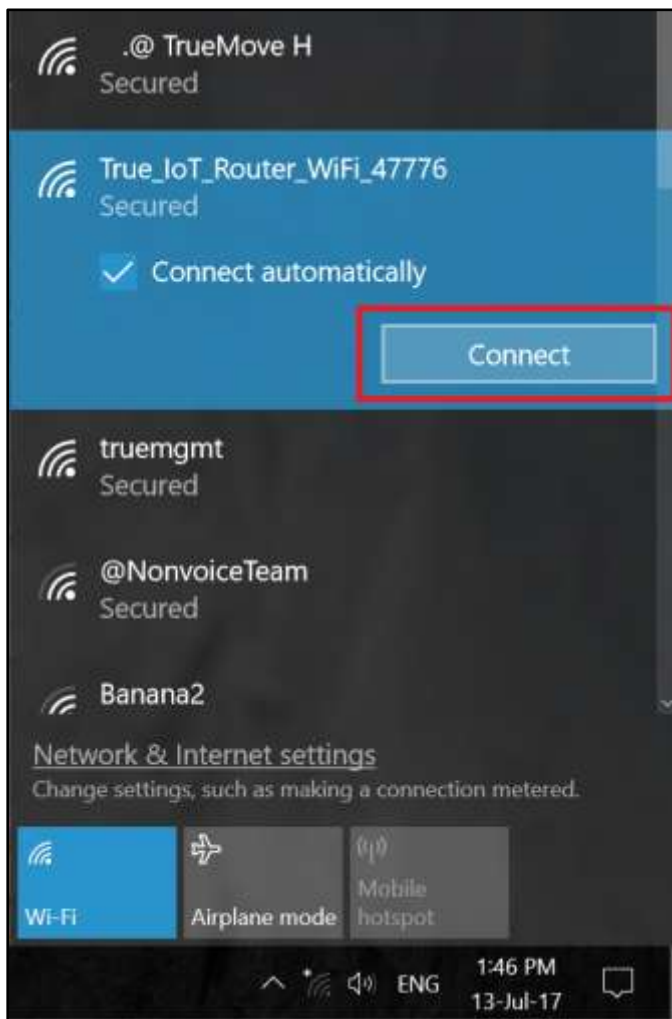

4. Then

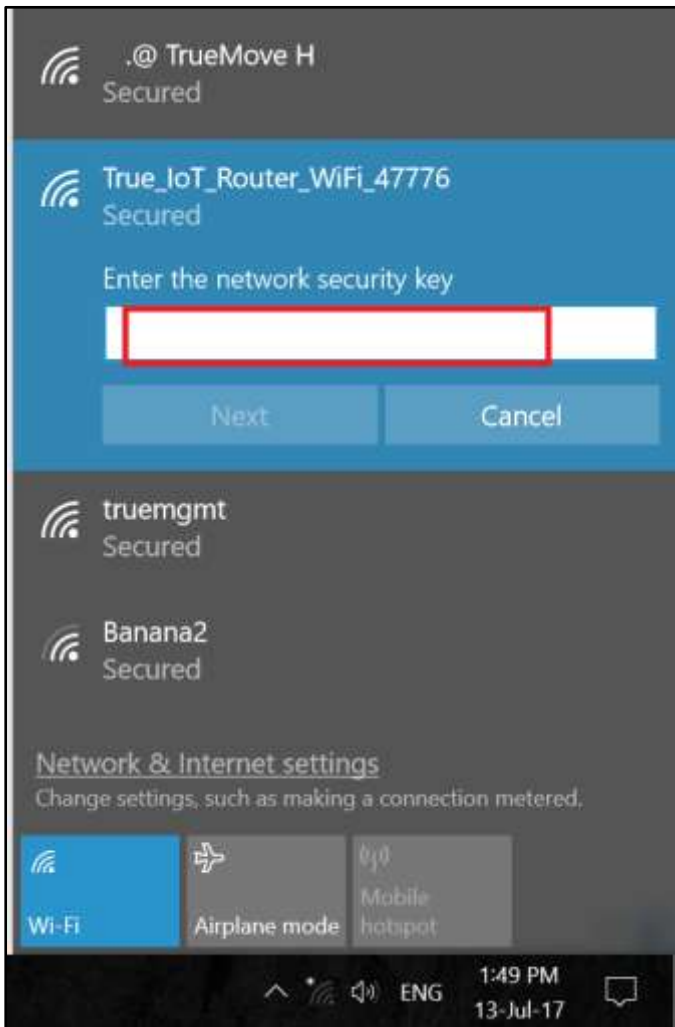

- Wi-Fi icon (fan) will turn blue = On
- System will search for nearby network => choose TrueIoT_Router_WiFi_47776
(refer to picture in no. 1)

- 5. **Connect button will appear, click this *** if don't want Windows 10 to automatically connect to Wi-Fi of True IoT Router WiFi, uncheck at Connect automatically

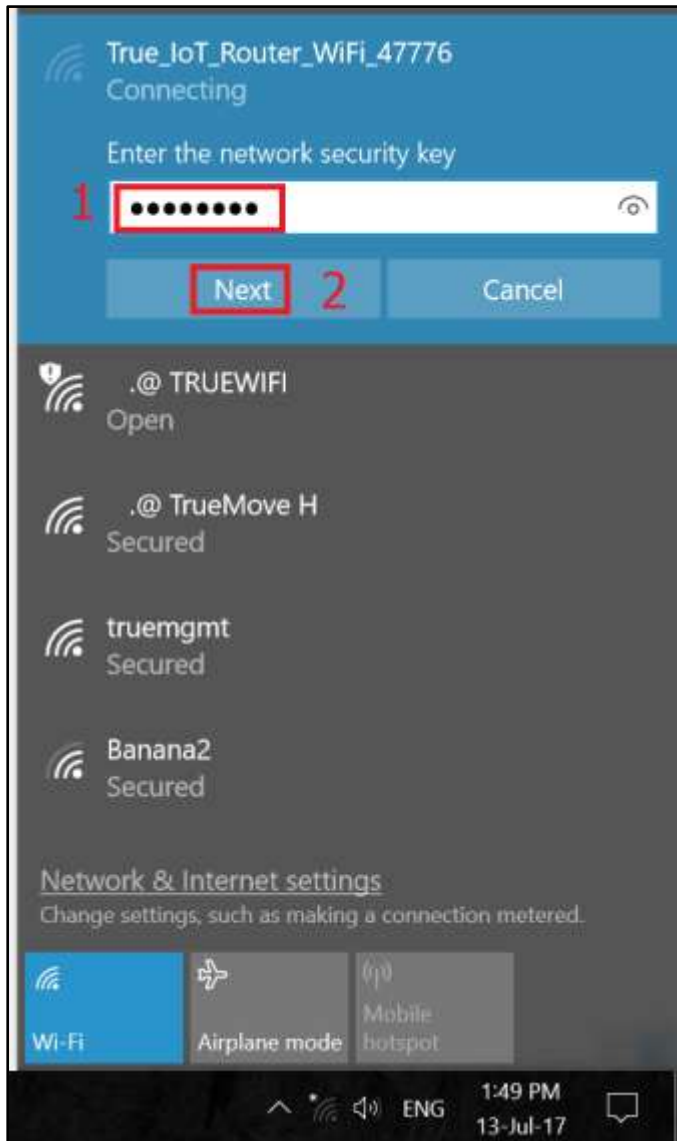

6. A popup to Enter the network security key

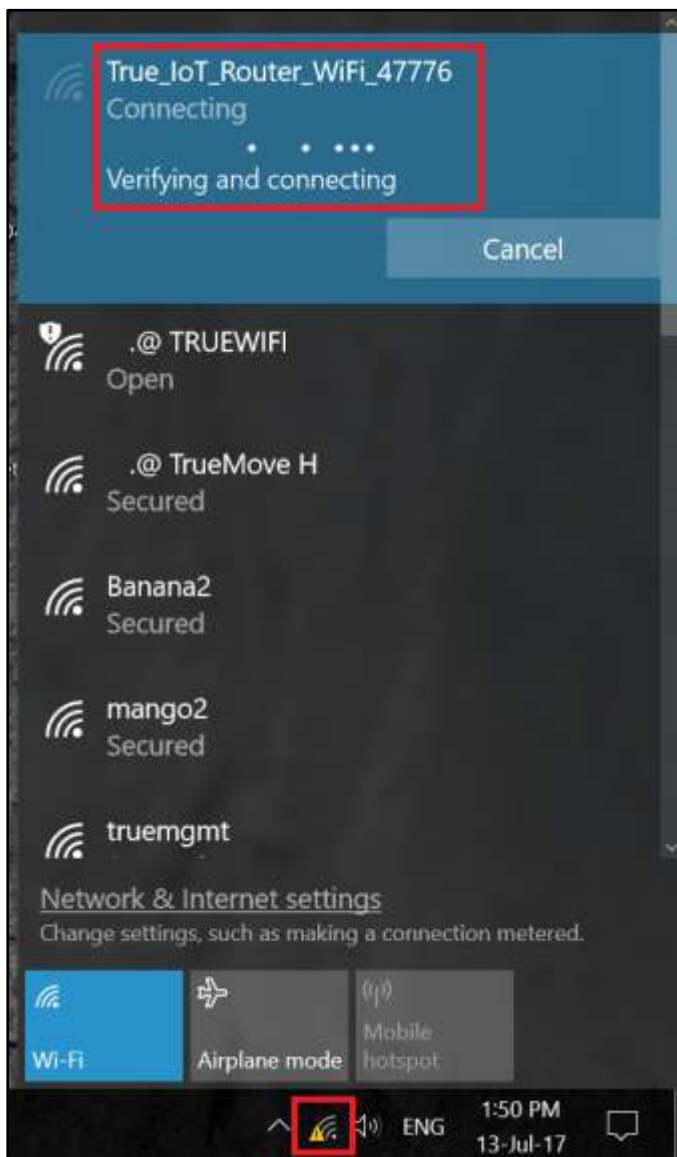

7. Then

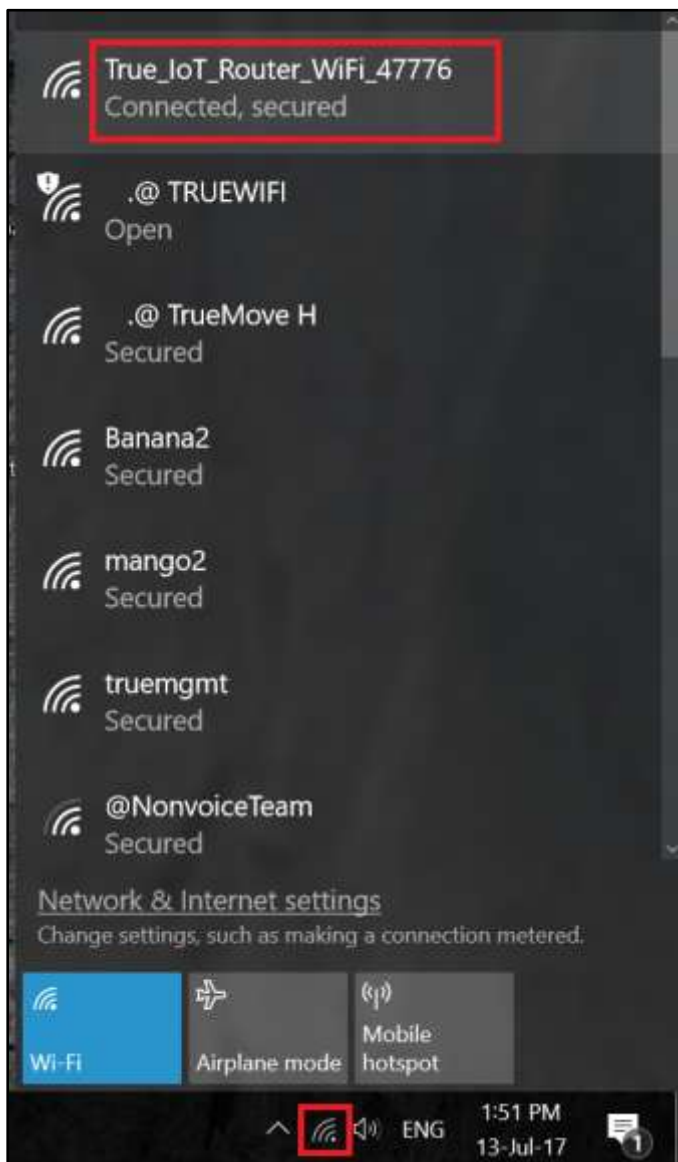

- Enter the password = 30247776 (each device will vary)
- Press **Next**

8. System will show status Connecting... Verifying and connection and a Wi-Fi icon (fan) below is white with a exclamation mark, wait a moment

- 9. Connected, secured will appear at network name and below Wi-Fi icon (fan) will turn white (no exclamation mark) when connected

10. Test to access Web Browser e.g. Google Chrome, Website www.truemove-h.com
