

How to set up DDNS on HUAWEI HG8247H

1. Open a Browser and type http://192.168.1.1 at URL bar and press 'Enter', a Login page appears
Enter Account = admin / Password = password

2. Select 'Network Application' --> 'DDNS Configuration' --> 'New'

3. Fill in each parameter (red border). If Service Provider is selected, do not change anything in Hostname/ Service Port. They will be set by Default

Network Application > DDNS Configuration

On this page, you can set DDNS parameters, including the service provider, host name, service port, domain name to be updated, user name, and password.

| WAN Name | Status | Service Provider | Domain Name |
|----------------------------|--------|------------------|-------------|
| 1_TR069_INTERNET_R_VID_100 | Enable | dyndns | dyndns.org |

Enable DDNS:

WAN Name: 1_TR069_INTERNET_R_VID_100

Service Provider: dyndns

Host Name: members.dyndns.org (1-255 characters)

Service Port: 80 (1-65535)

Domain Name: dyndns.org (1-255 characters)

User Name: (1-256 characters)

Password: (1-256 characters)

Apply Cancel

4. Once the setting is completed, click 'System Tools' menu on the top and click 'Save and Restart'

System Tools > Configuration File

On this page you can save the current configuration file to the flash memory. You can also save the current configuration files to the flash memory and enable the device to automatically restart.

Save Save and Restart
