INTERNET CONNECTION เลือก Maintenance

Use this section to configure your Internet Connection type. There are several connection types to choose from: Static IP, DHCP, PPPoE, PPTP, and L2TP. If you are unsure of your connection method, please contact your Internet Service Provider.

Note : If using the PPPoE option, you will need to remove or disable any PPPoE client software on your computers.

INTERNET CONNECTION TYPE

Choose the mode to be used by the router to connect to the Internet.

My Internet Connection is :

DYNAMIC IP (DHCP) INTERNET CONNECTION TYPE

Use this Internet connection type if your Internet Service Provider (ISP) didn't provide you with IP Address information and/or a username and password.

Host Name :

MAC Address : - - - - -

(optional)

Primary DNS Server :

Secondary DNS Server : (optional)

MTU : bytes MTU default 1500

5. At Dynamic DNS > place a check mark at **Enable DDNS** > click Drop down > choose the service provider, then press <<

DIR-605L	SETUP	ADVANCED	MAINTENANCE	STATUS
Device Administration	DYNAMIC DNS			
Save and Restore Settings	The Dynamic DNS feature allows you to host a server (Web, FTP, Game Server, etc...) using a domain name that you have purchased (www.whateveryournameis.com) with your dynamically assigned IP address. Most broadband Internet Service Providers assign dynamic (changing) IP addresses. Using a DDNS service provider, your friends can enter your host name to connect to your server no matter what your IP address is.
