

## Enable VoWiFi (Native) on True SMART 4G M1 Series

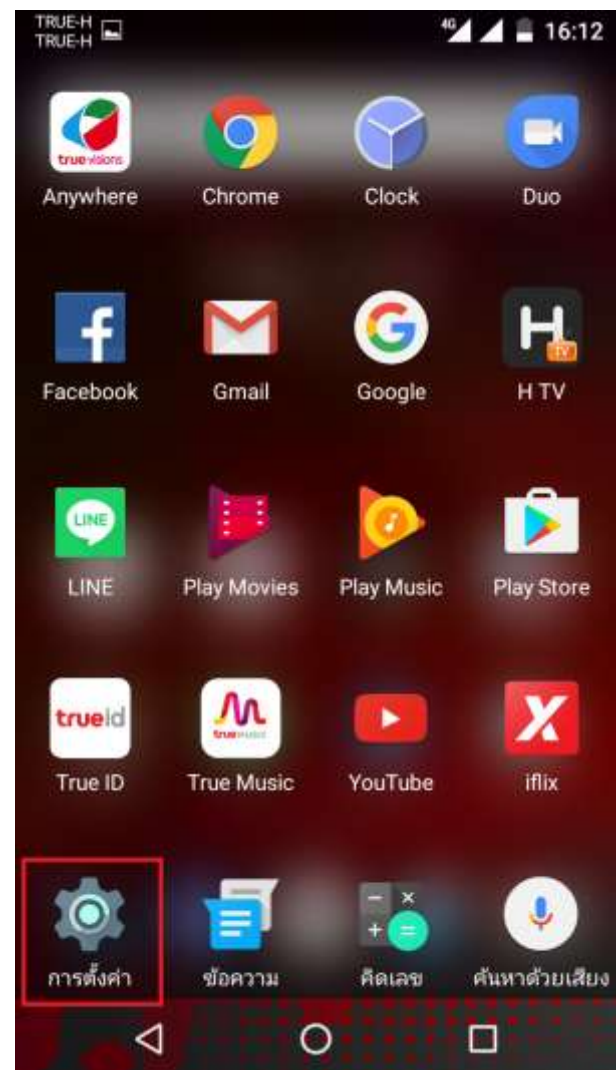

This setting is applicable to all models of True SMART 4G M1 as well as TAB 4G M1

**VoWiFi (Native)** is to make call through Wi-Fi by using device qualification, no need to install additional Application

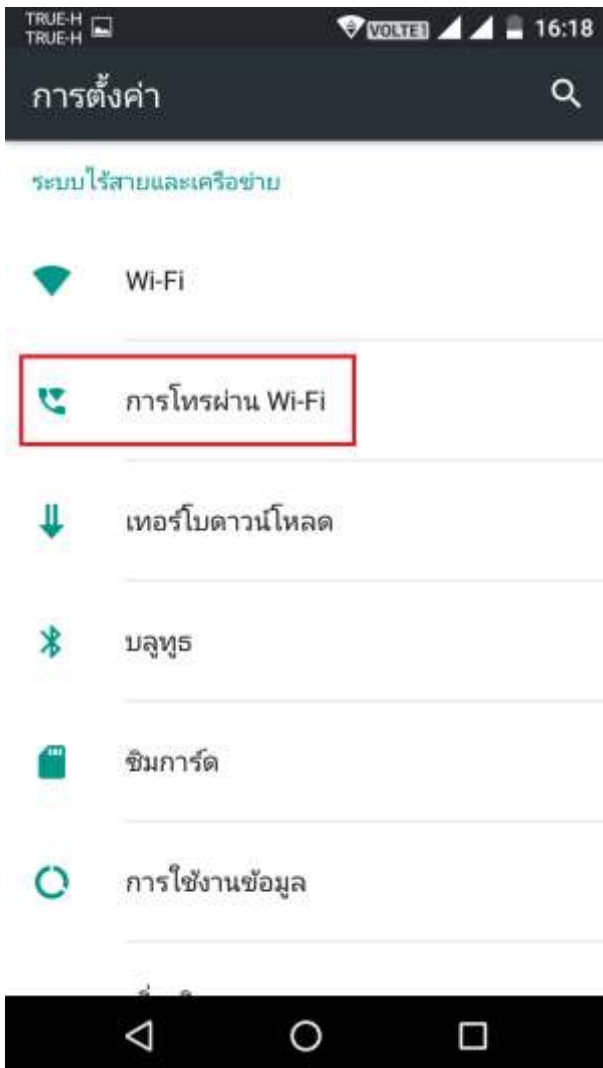

1. On Home screen, select **[Menu]**

2. And then **[Settings]**

3. Select [Wi-Fi calling]

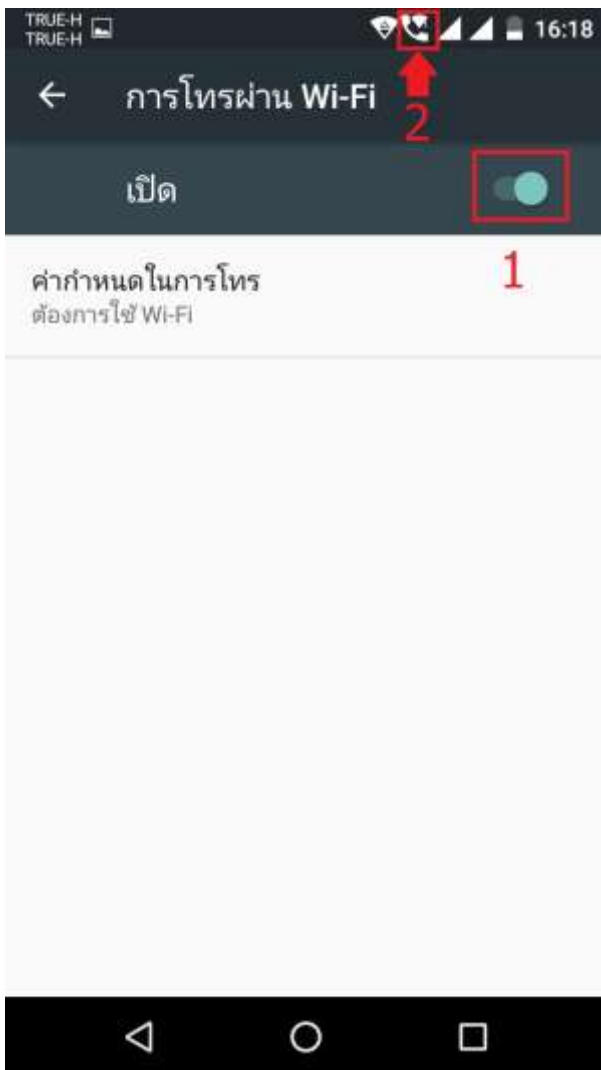

4. Notice a button on the right

(grey = Off, green = On), tap turn it on

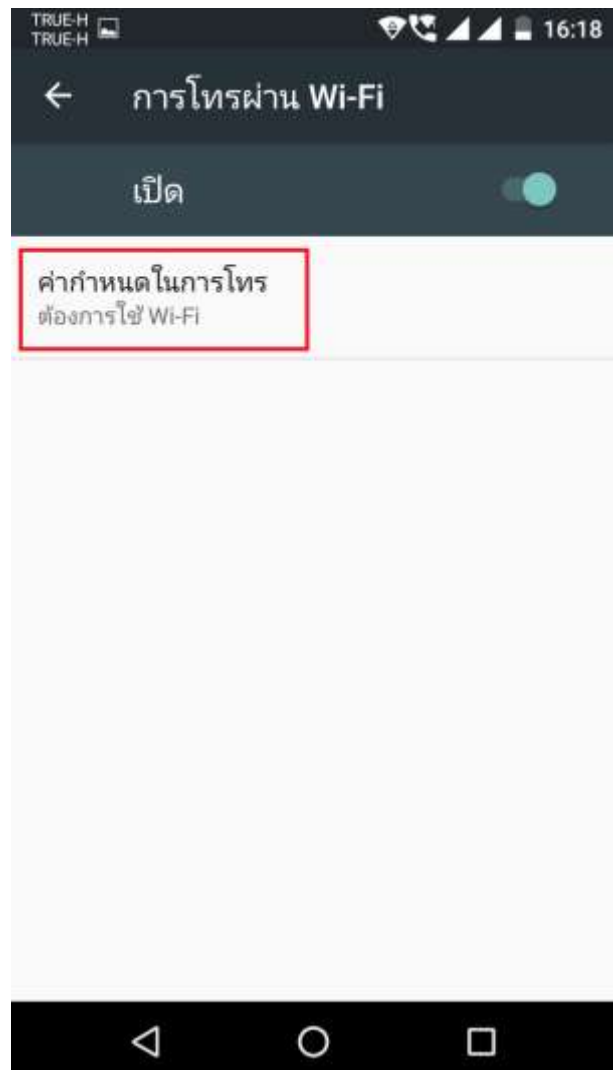

5. After that

- Green button : enabled
- Once connected Wi-Fi > it'll show a telephone receiver and fan sign on the top right
- VOLTE sign will disappear

6. Once enabled (whether system connects VoWiFi (Native) or not), Wi-Fi [Calling preference] will appear. If being in the area where having both cellular network and Wi-network, choose what prefer to use first

7. 2 options are

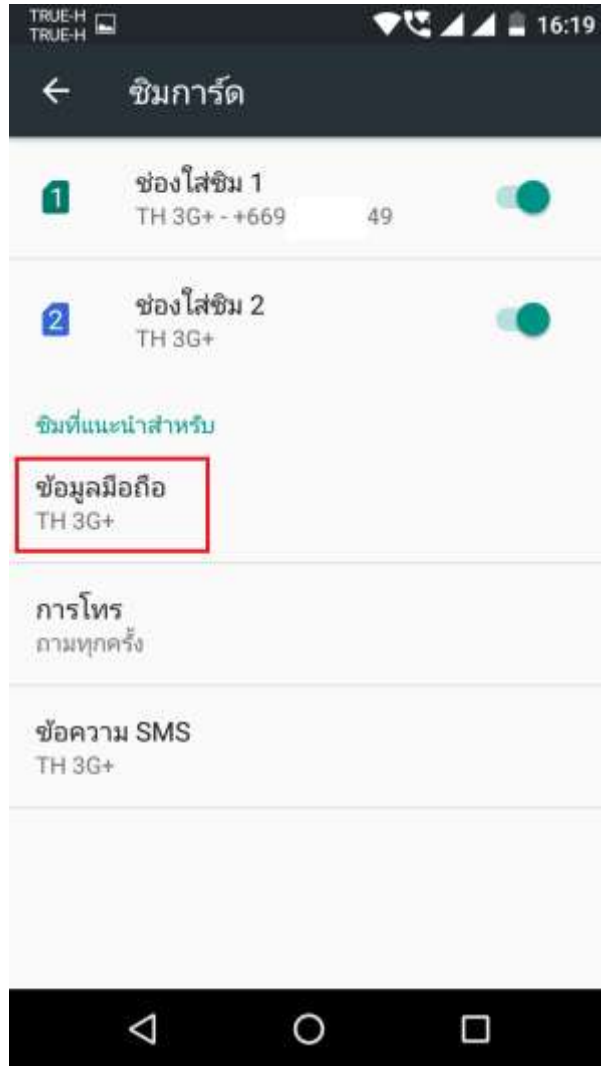

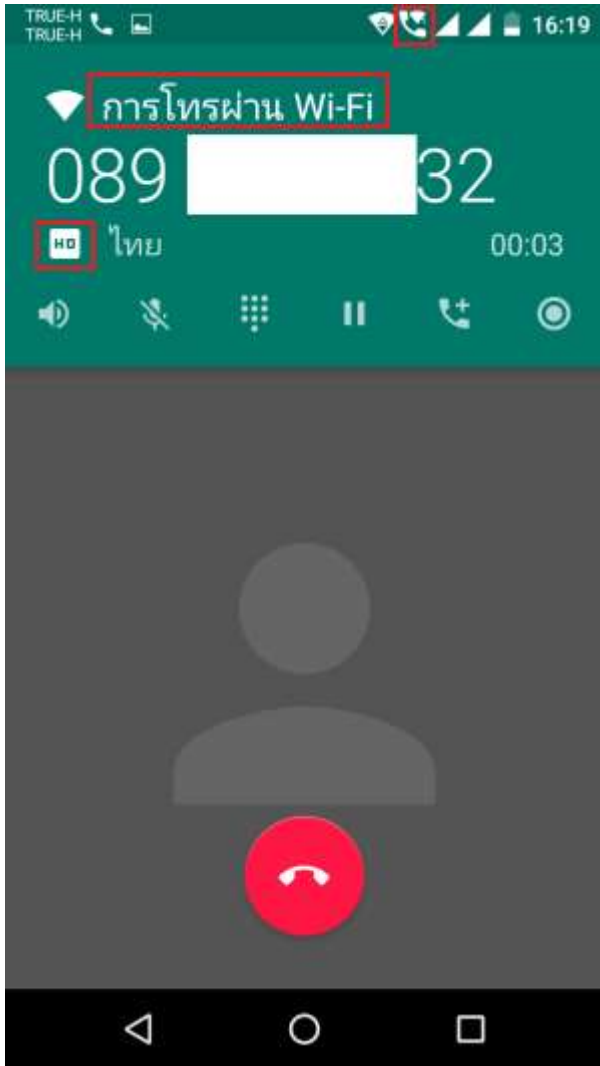

- [Wi-Fi preferred], recommend to select this for using VoWiFi (Native first)
- [Cellular preferred]

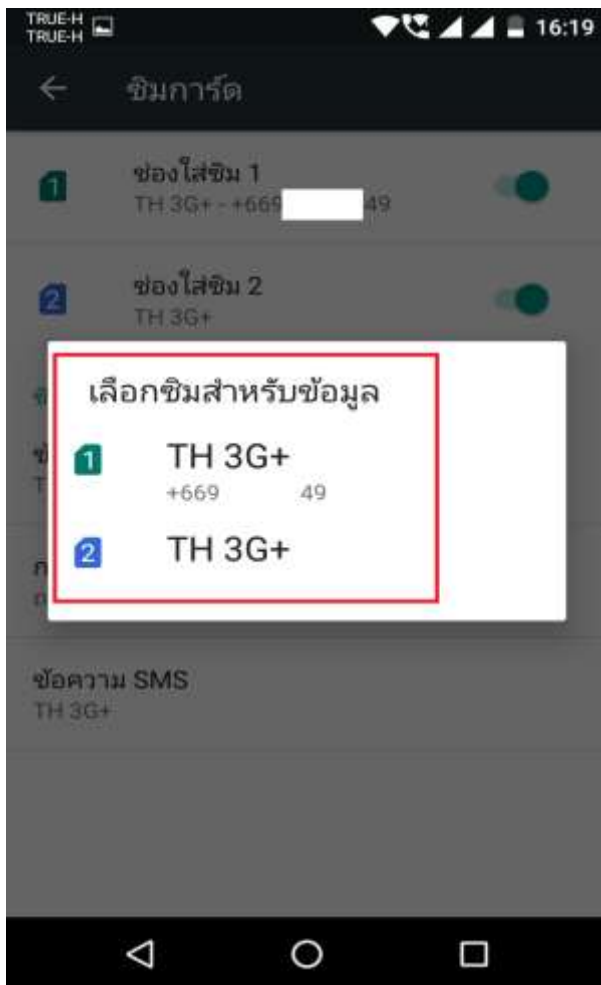

8. When there's incoming call, it'll show [Wi-Fi call]

9. When received call, it'll show [Wi-Fi call] and HD sign. If making call, the destination should answer call first, so it'll show [Wi-Fi call] as well
10. If the device supports 4G for both 2 SIM cards, you can choose SIM for VoWiFi (Native) usage by selecting [Cellular data]

11.[Select a SIM for data], select SIM that you want to use VoWiFi (Native) at that SIM

### Advisory

- If 2 SIM cards are inserted, VoWiFi (Native) will appear only at the selected SIM
- If change to choose Cellular data at SIM2 => VoWiFi (Native) will be used at SIM2
- If SIM1 is disabled, but Cellular data is chosen at SIM1 => SIM2 will not support VoWiFi (Native)
- If SIM1 is disabled, but Cellular data is chosen at SIM2 => SIM2 will support VoWiFi (Native)
- House Brand device will not support VoWiFi (Native) from other operators because TRUE doesn't know the Parameters
